2. Scientific Leadership Profile

Rodrigo Ozorio (RO) have developed an integrative approach to study nutritional dynamics of fish, fish physiology and metabolism, using molecular, cellular tools combining with the indicators at whole organism level for the understanding of the basis of animal performance. RO obtained a Ph.D. degree in 2001 at Wageningen University and Research Centre (The Netherlands), working with prof. Dr. Bram Huisman, Prof. Dr. Johan Verreth, who had important role in the development of the basis of the modern fish nutrition studies. For the post-graduate training RO applied commonly used methodology in animal nutrition and physiology and helped to developed novel concepts on the role of dietary supplements in the dietary energy mobilization under different abiotic and biotic conditions. These studies are published in international referred journals with high impact factors in the field of nutrition. During the development of the scientific career, RO focused on the research of the biological basis for promoting sustainable aquaculture, using microscopy techniques, biochemistry, physiology and molecular biology. Special attention has been given to the study of the nutritional dynamics of fish and the economic potential of new aquaculture species based on a set of husbandry and physiological criteria. To do so, RO carried out a concerted effort to identify bioindicators of physiological condition, nutritional status, growth potential and quality of fish.

Currently, as a senior researcher, RO is a National Delegate in a COST action entitled CephInAction - A network for improvement of cephalopod welfare and

husbandry in research, aquaculture and fisheries (http://www.cost.eu/domains_actions/fa/Actions/FA1301). RO also coordinated an IBEROEKA network. RO was advisor of a posdoc research, he is/was a supervisor of 8 PhD theses and 15 MSc theses. RO participated in 20 national and international projects, including 2 as project leader and 4 as scientific leader, in an overall budget of over 2.0 million euros. RO have published 54 papers in international peer review journals. RO is a regular reviewer for several international journals of high impact in the Animal and Nutritional Science, including "Aquaculture Nutrition" , "Aquaculture Research" , "Journal of the World Aquaculture Society " , "Scientia Agricola" , "Animal Feed Science and Technology “, " Journal of Applied Aquaculture ". RO is currently an Associate Editor of "Journal of Applied Aquaculture". Currently, RO is focusing on how nutritional factors may modulate fish biology, and how the interaction between both may play a role in the resistance against different biotic and abiotic stressors.
